

ENVIRONMENT POLICY

Caring for the environment is a key objective of our business.

We shall act responsibly to prevent pollution and shall demonstrate compliance with applicable legislation and to other requirements to which the company subscribes. Where practicable, environmental considerations will be integrated into our business to improve the sustainability of our activities, products and services.

It is the responsibility of all employees to respect this policy and training will be provided in the environmental affects of our activities. We will maintain our environmental management system (EMS) complying with the requirements of the International Standard ISO 14001 to facilitate continual improvement and to minimise our impact on the environment. Key business objectives include:

Promote the efficient use of energy in our business;

Reducing pollution and emissions associated with our transport;

Minimising waste, reusing and recycling materials (i.e. packaging) where possible and disposing of waste responsibly;

Improving water conservation and:

Encouraging our contractors to adopt similar environmental values.

GWIBS shall establish specific targets to satisfy these objectives and performance shall be monitored to ensure continual improvement. Employees play a critical role in the implementation of this policy and performance will be communicated accordingly to encourage active participation. Senior Management will demonstrate commitment to this policy by means of leading by example and shall periodically review this policy.

Graham Wright
Managing Director

GWIBS Environment Policy
