Introduction

Gwibs 24/7 are an integrator of IT and telecom and electrical services providing specialist services to all sectors of industry.

From our centrally located headquarters in Bingham Nottinghamshire we have specialist field engineers throughout the country installing and maintaining network infrastructures.

Gwibs 24/7 work in partnership with leading technology companies to identify the most innovative and cost effective network solutions.

Converged systems are a major part of our Network Services portfolio. Using products and services from people like Cisco, Motorola, Aruba and Microsoft our team of in-house specialists can deliver a wide range of integrated ICT solutions.

Our structured cabling systems are designed and installed by fully qualified personnel accredited by the manufacturers whose products are being installed. Our systems are 100% tested, certified and documented for the customer to EIA/TIA standards. And depending on the manufacturer and product type, our Structured Cabling Systems carry a 15 or 25-year warranty. For further peace of mind we offer maintenance contracts with a four, eight or twenty four hour response time. And thanks to the engineering quality and supporting documentation provided, future change's can easily be implemented at minimum cost.

We specialise in: Network Cabling Cat5E & Cat6/Optical Fibres SM/MM/Voice Solutions/Electrical Wiring/Wireless Networks/Network - LAN & WAN Designs Network Hardware/Fire Alarm Systems/Groundwork's/Office Refurbishment/Project Management P2RP.

With today's technology becoming increasingly more sophisticated, you need a Network Design and Implementation Partner you can rely on. Gwibs 24/7 is an organisation that can take care of your Network requirements leaving you to concentrate on your core business requirements.

Our Range of Network Services

The facilities we can offer include consultancy, design, project management, installation and on-site support staff. These are the very skills that keep organisations communicating all day long. Our Services can be broadly split into the following areas:

Design

As Cisco Accredited specialists we are able to offer a full design service. Brief us on your requirements and we will provide you with a cost effective, fit for purpose, integrated solution.

Routing & Switching

We are experienced in the full project cycle from design through implementation to ongoing in life support and maintenance. We provide this range of services across the whole spectrum of Small Office / Home Office (SOHO) solutions to multi-national corporate implementation and support contracts.

Unified Communications

Full Cisco Unified Communications experience to ensure your project is a success. You can be confident that we are implementing world class solutions both in terms of the services and also the equipment that you will rely on.

Wireless Networking

Tried, Tested & Envied, our wireless portfolio will enable you to get it right first time. Our wireless implementation and support skills are currently looking after a major Tier 1 food retailer.

Quality of Service (QoS)

Today we demand much more from our networks and these demands are further fuelled by emerging voice and video applications. We will implement a QoS regime to ensure that applications are prioritized on your network according to agreed parameters.

Simply increasing the bandwidth is often a lazy solution to a very active problem. A proper QoS systems solution will enable you to get far better results from your network, which will ultimately save you money.

Management & Support

Get the best from your Cisco investment with our Management and Support offering. We will work with you to implement a Systems Management regime that will provide an automated service allowing for proactive monitoring of alerts from your estate. This can then feed into our 24 hr Help Desk service that will take the appropriate course of action to resolve or escalate.
